

As we know, At the Atmosphere around The earth there are several layers which are ducting the electromagnetic waves in different situation. As an example Radio Communication during the night in ionosphere is possible long-distance.

Electronics Desk

Eco Waves (Reflection) under the whispering dome cause the travelling waves go through up and down of the Structure. For sure, To Trapped the signal we need Tunable Resonance Element under the dome to Track the desire waves. I propose the 4G cellular Network as an example the 900 & 1800 Mhz Antenna Deduction by LETI SPORT CAMPUS DESIGN under the Dome structure. On the other way to say, We need reflectors in Blind Spot instead of Antenna Design!

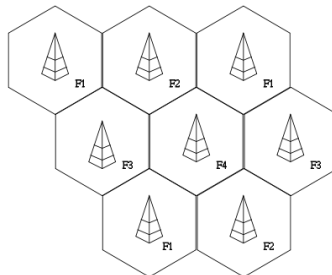

DOME SHAPE DESIGN

Figure 1 LETI SPORT CAMPUS

Note : The Cellular Network Antenna surrounded by 6 other Antenna To have Area Coverage

By this suggestion, I like to say the back yard in the LETI sport which like inhomogeneous design Transfer To Aquatic Green Energy (like spa or ... Chamber with cellular ducting) which is best for showing how we drop the cellular to minimum one with eco-friendly design by Ducting the waves. Furthermore, we can use the New Life-Style Smart design by Air Navigation New Clocking Instead of Traditional Clock and important to uses the Earth-Quake Resistant Structure also During the Climate Change The Proposal not limited only to Electronics but recycling the water to tank and self- Electricity Production independently in sequences.

We Think Green To Save The Earth
